Model Years: 2004 ^{1/2} – 2006

Mopar Part Number: 82208835AB

GRAB LIFE BY THE HORNS

JACOBS EXHAUST BRAKE

How to drive with a Jacobs Exhaust Brake™:

- Turn the brake switch on.
- When you release the accelerator pedal, the exhaust brake comes on automatically.
- To obtain the optimum braking performance from the Jacobs Exhaust Brake™ it is necessary to keep the engine RPM as high as possible, but NOT TO EXCEED 3100 RPM.
- Use of exhaust brakes is not recommended during wet or icy road conditions. Exhaust brake operation is recommended only when you have good traction with the road surface.

How it works:

- The brake is actuated by vacuum created by an engine-mounted vacuum pump.
- The brake valve closes, creating restriction in the exhaust stream.
- This restriction causes the engine to work harder to push exhaust gas out of the engine during the exhaust stroke.
- This extra work slows down the engine and vehicle.
